Academic Projects

Weight & Mean Grade Calculator

Web Development

CMPT 276 - Intro to Software Engineering

Jan 2022

- Created a web application using HTML, CSS, and JavaScript that would aid students in calculating their mean and weighted grade
- Implemented a button to allow users to add additional activities and a button to reset the inputs
- Added error handling to manage invalid inputs along with outputting error messages

Personal Projects

CourseRate

<https://course-rate.herokuapp.com/>

Jan 2022 – March 2022

- Built and designed a full-stack web application that allows students to post or browse reviews for SFU courses
- Utilized Postgres, Express, React, and Node.js in creation and maintenance
- Implemented and managed a Postgres database to store review post data, calculate averages, and display it on screen
- Ensured a seamless user experience by executing user testing and adhering to UX/UI design specifications

Blogging Website

www.github.com/VanCityEric/react-blog

Dec 2021 - Jan 2022

- Developed a dynamic blogging web application using HTML, CSS, JavaScript and React
- Utilized the Bootstrap CSS framework to manage the styling and design of the website
- Implemented Google's login system for authentication using Firebase to allow users to create their own personal blog posts
- Organized and stored blog post information into a Firebase database which gives the ability to create and delete posts
